Generative AI AI Robotics - Release Notes V 4.x.x

Date: Mar 2026

What's New: More Human-Like Interactions and Smoother Conversations

Overview

This update focuses on making interactions feel more natural and human-like, while improving the smoothness of conversations. With **upgraded UI**, enhanced avatar movement, and better lipsync, users can engage more seamlessly. The new Live API and Gemini Sound integration also enable faster responses, improved flow, and a more consistent and reliable user experience.

UX UI V.4

1. Modernized UX/UI

- Transparent Themes
 - New Keyboards
 - Able to show/hide answer transcription
2. Full Body Avatar & Body Movement
 3. Quick Reply Carousel
 4. Improved Lipsync. (In-Progress)

Live API

1. New tech stack: Using **Live API** to deliver ultra-smooth performance and a more seamless user experience. (requires Gemini Sound)
 - Massive reduction in response time and processing delays.
2. Auto Language Detection (requires Live API and Gemini Sound)

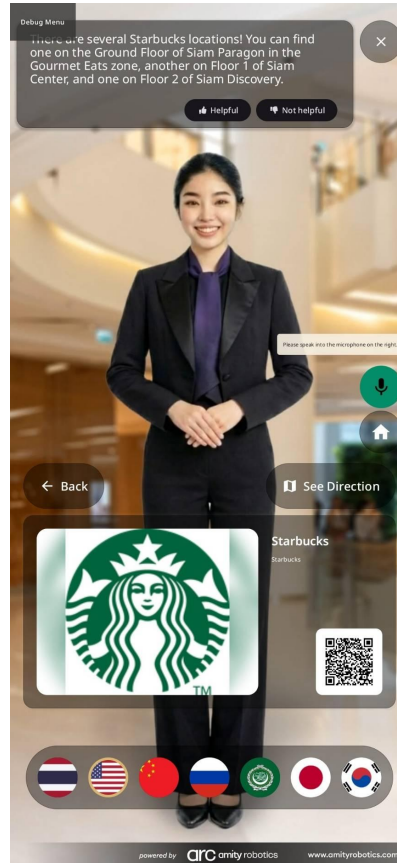

Release Notes: UX UI V.4

Refine the overall UI to be more modern and clean, enhancing usability and overall user experience.

Transparent Theme:

You can now use a transparent theme for buttons, while still having the option to use solid colors as before.

Able to show/ hide answer transcription

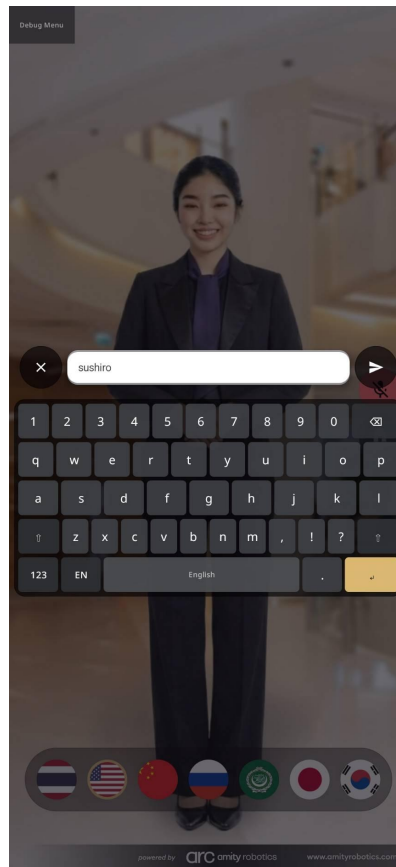

Release Notes: UX UI V.4

Refine the overall UI to be more modern and clean, enhancing usability and overall user experience.

New Keyboards

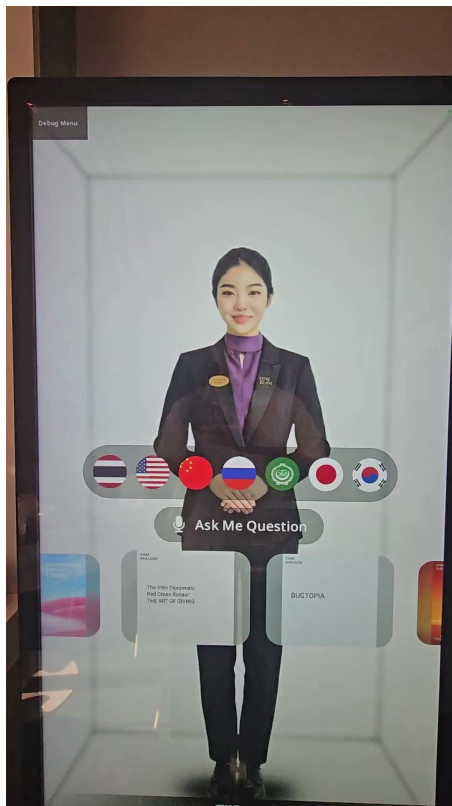

- The keyboard is now repositioned to the center of the screen for better accessibility and visibility.
- Language switching on the keyboard is now aligned with the selected interaction language:
 - If Thai is selected, the keyboard can switch between Thai and English
 - If Chinese is selected, the keyboard can switch between Chinese and English
 - If English is selected, the keyboard will support English only

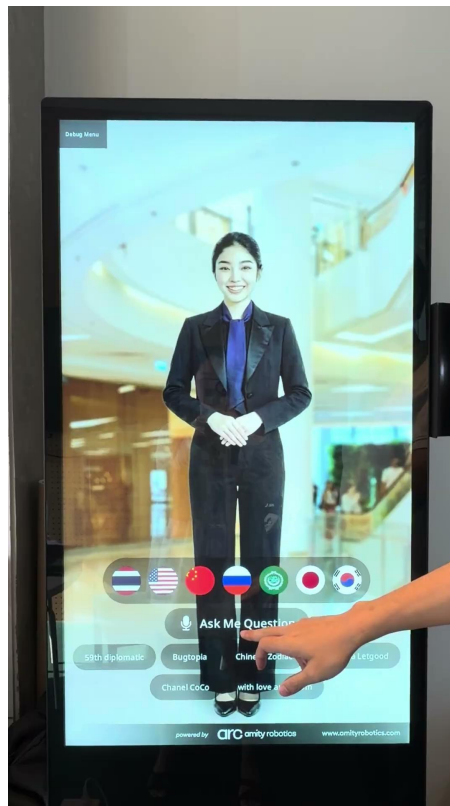

Release Notes: Full Body Avatar & Body Movement

The avatar is now displayed in full body with added body movement, creating a more engaging and lifelike interaction experience.

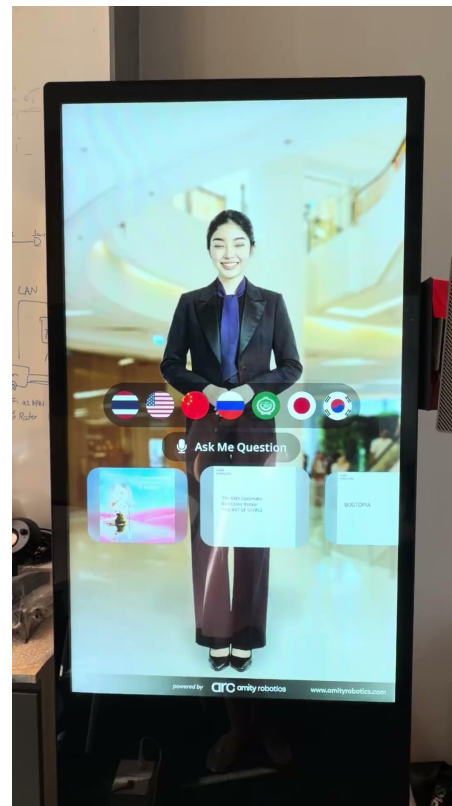

White Box BG

Sawasdee Greeting

General Greeting

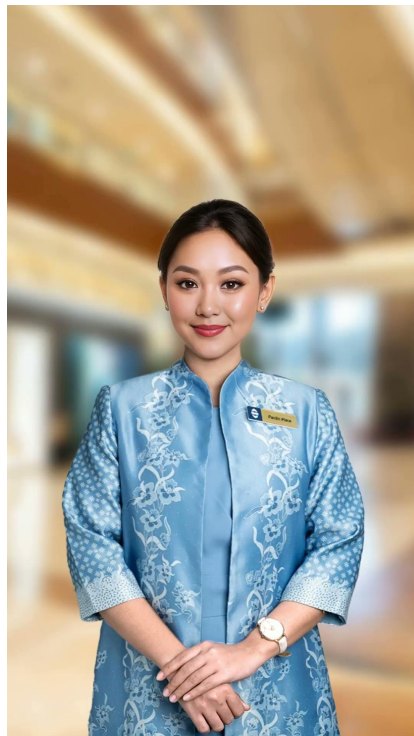

Release Notes: Full Body Avatar & Body Movement

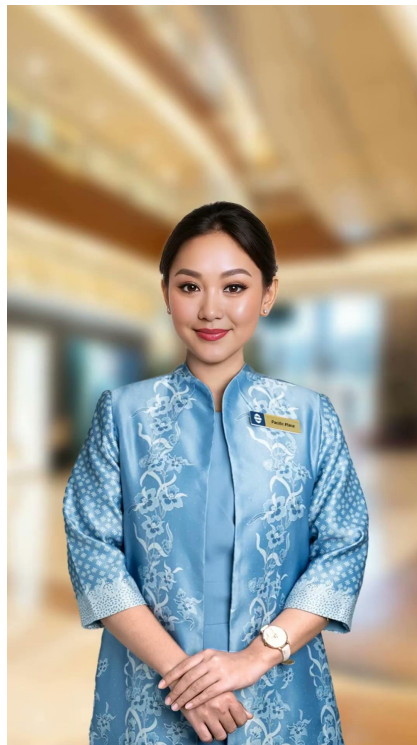

The avatar is now displayed in full body with added body movement, creating a more engaging and lifelike interaction experience.

- It can also be used with a half-body avatar.

General Greeting

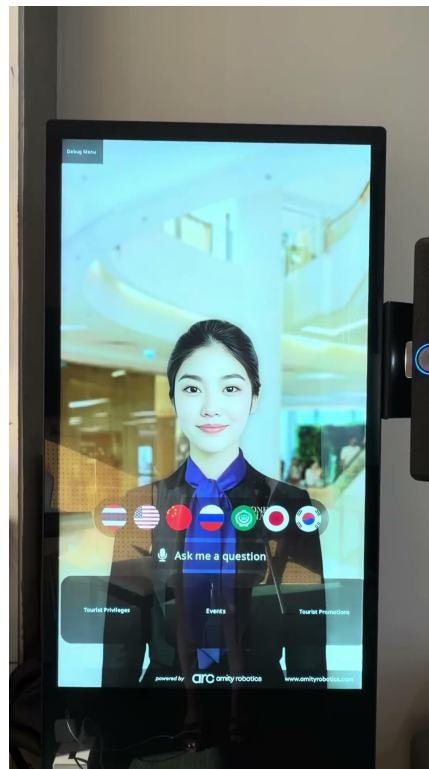

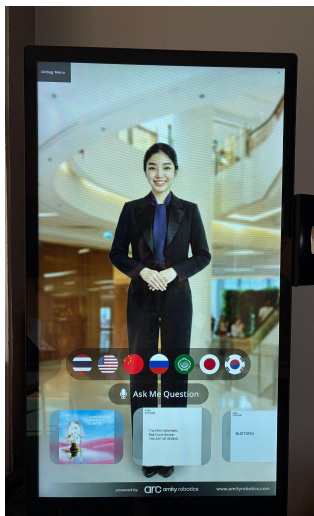

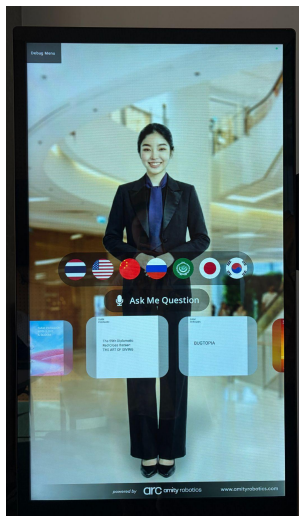

General Thank you

Release Notes: Quick Reply Carousel

- Quick Reply has been upgraded from text-based buttons to an **image-based carousel** for a more engaging and visually appealing experience.
- The carousel position is now configurable - it can be displayed either at the center of the screen or at the bottom, depending on the desired UI layout.
- During the idle stage, the carousel will automatically scroll to continuously showcase available options.
- Text-based quick reply buttons are still supported and can be used as before.

Release Notes: Live API

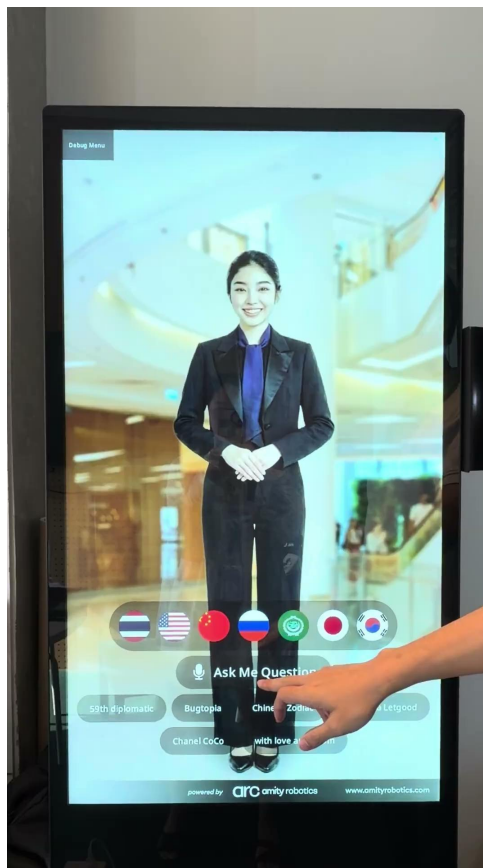

Live API Performance Upgrade

- Introduces a new tech stack powered by Live API (requires Gemini Sound)
- Delivers ultra-smooth performance and a more seamless user experience
- Significantly reduces response time and processing delays

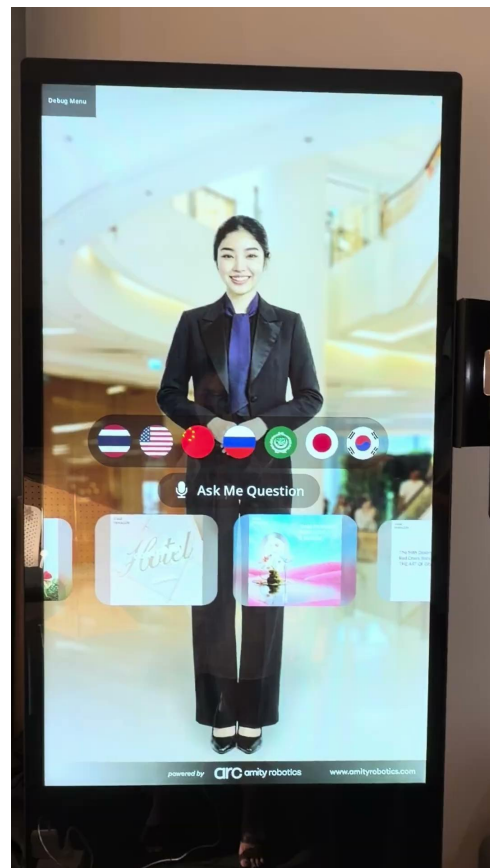

Key Benefits:

- Faster response time
- Real-time, smooth interaction
- More human-like and natural conversations
- Faster and more efficient answer retrieval using keyword-based processing

Live API: Starbuck

Live API: Multiple Stores

Non - Live API vs. Live API

Non - Live API

Live API

Non - Live API vs. Live API

Topic	Non-Live API	Live API
Conversation Flow & Speed	✗ Less smooth and slower responses ✗ Requires waiting phrases (e.g., “Please wait a moment”)	✓ Faster response time ✓ Real-time, smooth interaction
User Experience	✗ Feels more “AI-like” and less natural	✓ More human-like and natural interaction
User Question Display	✓ Can display and keep user’s question on screen	✗ Cannot persist user’s question on screen
Question Text (Speech-to-text (STT)) Accuracy	✓ Can analyze question text by comparing audio and text	⚠ Cannot directly measure question text accuracy, but can evaluate using alternative methods by reviewing audio and verifying whether the extracted keywords used for answer retrieval are correct
Keyword / Answer Retrieval	— Standard processing	✓ Faster retrieval using keyword-based processing
Tuning AI pronunciation (Brand / Specific Terms)	✓ Supports precise and consistent tuning	⚠ Currently not 100% supported, but the team is actively working on it

What will be coming soon?

In Q2, we will continue focusing on making interactions more human-like, while enhancing and refining existing capabilities.

- 1. Improved Lip Sync**

Enhance lip sync accuracy to better match actual speech for more realistic interactions

- 2. Auto Language Detection** *(requires Live API & Gemini Sound)*

Automatically detect and respond in the user's language without requiring manual selection

- 3. Interruption Capability**

Enable users to interrupt and ask questions naturally without needing to press an interrupt button

GTM Plan - Feature Selection Checklist

No.	Feature	Description	Select
1	ARC UX UI V.4	Modernized interface including new keyboards and themes	
2	Full Body Avatar	Enhanced avatar with full body movement for more engaging interactions	
3	Quick Reply Carousel	Replace text-based buttons with images to create a more visually appealing and engaging experience for customers	
4	Live API (requires Gemini Sound)	Enables real-time, smooth, and faster AI responses	
5	Auto Language Detection (requires Live API & Gemini Sound)	Automatically detects and switches language based on user input	

Note:

- Some features require dependencies (e.g., Live API requires Gemini Sound).
- You may choose only the features that fit your use case.
- [ARC V.4 GTM Plan V.1 \(20260330\)](#)

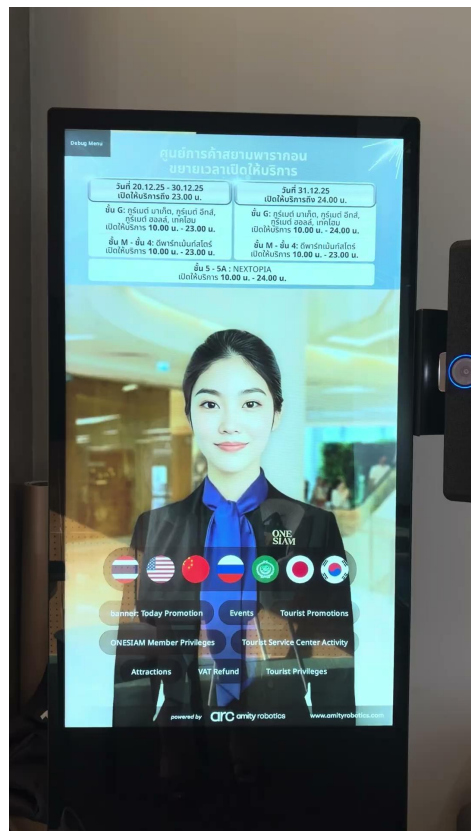

Thank you
